Interview with Harvey Padelford, (Mrs. chauffeur) 12/1/40
52 Russell Street

Harvey Padelford, who was Mr. Eastman's chauffeur from 1921 until Mr. Eastman's death, told of his routine on the way to work in the morning. Mr. Eastman pulled out a Lucky Strike from his pack of cigarettes and Harvey stopped at the end of the driveway while he lighted up. Harvey had arranged an electric lighter, operated on a cord to serve the rear seat of the car. When Harvey saw, in his rear-vision mirror, that Mr. Eastman had lighted his cigarette, he drove on. The one cigarette lasted until Mr. Eastman arrived at work, and he threw the butt away as he stepped out in front of Kodak Office.

Toward the last, he lighted his cigarette with the silver combination case and lighter with the initials "G.E." which Harvey gave him for Christmas, 1931. He wanted to keep it looking new so he had his nurse make a red silk protective case for it. Mr. Eastman liked to study the mechanism of lighters, and he experimented with various fluids. Gasoline caused too much smoke, so he adopted regular lighter fluid. (Possibly Mr. Eastman preferred lighters to matches because there were no burnt sticks to throw away and cause litter. This would be in line with his annoyance at people throwing things on the sidewalks. After a concert, when he saw a woman throw away her program after coming out of the Eastman Theater, he spoke to her about it and pointed out the cleaning-up work which such carelessness caused.
Mr. Eastman usually was driven to work down East Avenue, across Main Street. As they drove along Franklin Street, he almost always carefully noted the time on the clock in the tower of St. Joseph's church. They passed into St. Paul Street and thence along Platt Street to Kodak Office. Mr. Eastman occasionally varied his usual route, without telling the reason, but Harvey believed he did so to observe the city for possible improvements. Sometimes they drove along Court Street and Mr. Eastman observed the location where he wanted the Civic Center.

Mr. Eastman did not read the morning paper in the car but he read the evening paper on the way home in the afternoon. Harvey, while he waited outside the office picked out items that currently interested Mr. Eastman and "the boss" read them as he was driven home.

The only timepiece Harvey ever saw Mr. Eastman carry was his mother's small plain-gold watch, which he checked against the church clock. He had a rubber washer placed over the stem to keep it from falling out of his vest pocket, for he did not wear a chain. Harvey frequently took this watch to E.J. Scheer's jewelry store on Main Street (now 253 Main, East) to be adjusted, for Mr. Eastman considered punctuality a great virtue and he wanted his watch to be accurate.

Mr. Eastman usually talked with Harvey as they drove, although he was careful not to distract his chauffeur's attention by talking too much or when they were in heavy traffic. If they narrowly missed a "jam" Mr. Eastman did not get excited about it. Once, Harvey was driving Mr. Eastman and Mr. Albee, the motion picture owner, along
East Avenue. The tires slipped on the wet pavement and, in bringing the car to a stop, Harvey had to make a very abrupt turn. Mr. Eastman said nothing, but next day he quietly asked how it had happened.

Shortly after Harvey came into his employ, Mr. Eastman gave him a suggestion to use caution. He said "Harvey, you have the name of being a fast driver. Don't have any accidents." They had none, because Mr. Eastman didn't lay himself open to the operation of chance through disobedience to law (a trait which characterized him with regard to all rules, laws, and principles.) They rarely exceeded the (then) speed limit of 30 miles an hour, and Harvey never "jumped" a traffic light, for he knew Mr. Eastman would not want this done. Mr. Eastman was interested in public safety and, in 1924, when the system of Stop-Go lights was newly adopted in Rochester, inquired of Harvey, out of curiosity, how many of these lights there were in the city. Harvey asked Deputy Chief of Police, Miller, and relayed the information to Mr. Eastman that there were 74.

The only time Harvey saw Mr. Eastman get excited about anybody's driving was in 1924 when they were driving home from work one afternoon and, in front of the Moore building, in the middle of a block, on East Avenue, a farmer in an old car turned directly in front of his automobile. Mr. Eastman flared up for a moment and said "The damned fool! No wonder they have accidents!"

Harvey said Mr. Eastman always had two limousines. He did not often drive himself but sometimes he went out for an evening in a dark blue Cadillac roadster. He tried out a Packard-8 road-
ater in the winter of 1924-25, and drove up University Avenue in deep snow. He was a good driver and very cautious. He put out his hand and gave proper signals, and he turned corners carefully. However, he told Harvey in the mid-twenties "I have too much on my mind and traffic is getting too heavy for me to drive a great deal."

Mr. Eastman was the first person in Rochester to use balloon tires on his car (in the early 'twenties) and he enjoyed the extra riding comfort they afforded. He owned, at various times, a Packard roadster, a made-to-order Cunningham limousine, which cost $12,500 and was finished in two tones of green; and (the last car he owned) a Lincoln limousine, also finished in two tones of green (his favorite color).

He devised, in 1921, a handle, screwed under the window sills of the rear doors. By use of the handle he slid the door or pulled himself out of the seat without help from Harvey. George Eastman didn't want Harvey to get out and open the door for him, or to help him out. He opened the door himself and closed it. Thus, he avoided the appearance of belonging to a "privileged class" whom other people waited on.

Mr. Eastman exercised his mechanical ingenuity on an Imperial Packard limousine which he owned in 1926. It was equipped in the back, with seats for "extra" passengers. Mr. Eastman had an idea for disappearing seats which could be pulled out from under the regular seats when necessary, and slid back out of the way when not in use. He drew plans for the construction of these and had them made up by W.R. Gerber's auto repair shop on Alexander Street.
Mr. Eastman tried to solve the one drawback of a log fireplace which "toasts" persons near it and lets those at a distance shiver. At Oak Lodge, in 1927 or 1928, he put an iron reflector (made by Flesch & Schmitt, Rochester sheet metal workers) in the log fireplace. A hole was dug behind the fireplace and continued under the floor (there was no basement.) The reflector was placed behind the fire and was intended to throw the heat along the tunnel, which opened at the opposite side of the room in a "radiator", to warm the other end of the room. It helped some, but Mr. Eastman did not get as good results from it as he hoped for.

He exercised his mechanical skill by making a "safe" stove for his Alaska trip. He drew the plans and Flesch & Schmitt, constructed the stove at a cost of $400. The fire went over the oven and down the chimney at the back, which opened downwards so sparks would not fly upwards and set fire to trees in the open. The legs folded, the chimney telescoped, and cooking utensils were nested in the oven. It was so compact (two by three feet) that if fitted readily on the back of a mule or horse. When it was finished, Mr. Eastman put it to a practical test in the garage before using it in the field. He asked Harvey to put a pan of water on it and find out how long it took to boil.

Mr. Eastman knew the value of "practical" ability. He believed, in addition to the "bookish" arts, children should learn handicrafts and useful trades. He believed work with the hands was an expression of intelligence and it helped to develop the minds. At the Eastman School for colored children at Ringwood, N.C., near Oak Lodge, the boys were taught masonry and carpentry (they frequently built
fireplaces in their homes) and the girls were taught cooking, sewing and other domestic arts.

Mr. Eastman owned excellent equipment for hunting and he wanted to ensure its proper use by his guests and by himself. Harvey recalls, before the African trip in 1927, he took Mr. Eastman and Rev. and Mrs. Norton to Rush, N.Y. (a small town near Rochester) to a range to give them rifle practice. Mrs. Norton, who had never used a rifle, was instructed, and Mr. Eastman practiced shooting on this Sunday morning. He owned two Mannlicher rifles, one Springfield with a telescope on it with hair-line sights, and two elephant guns of English make. The Springfield was a "star" (or extra quality) rifle and was sometimes known as a "sporter" as it is finished more elegantly than the ordinary rifle.

He took nothing for granted. When someone said something against a person, Mr. Eastman reserved his judgment until he checked the opinion for himself. He "checked up" on many things to avoid mistakes and disappointments. With the aid of Miss Whitney, he made up a detailed itinerary before he went on a trip. Harvey said if the trip lasted several months he knew the day, the hour and the train on which he would return. His tents (bought from Abercrombie & Fitch, New York) were taken from their bags in the garage before a camping trip. They were put up on the lawn and examined to see they had no holes or rips, and that the ropes were strong and not frayed.
He made up in advance the ingredients for his cooking on trips. He measured and weighed quantities, and tested the recipes. He tried out the refrigerator he took on his African trip at Oak Lodge and on his chartered boat before he finally decided upon it. The one he chose had its moving parts enclosed, and he felt this made it less liable to accident from the hardships of a camping trip.

When he was not sure of customs or practices, he made it a point to "check up" and find the right way to do a thing. A friend once told him that the flag he hung over his door on a patriotic holiday was not properly displayed, and he asked Harvey to get a copy of the American Legion Flag Code (1924). Mr. Eastman marked an X on the code illustration which showed the proper position of the field of stars when the American flag is displayed vertically. This code now hangs on the wall of the garage at 900 East Avenue. The flag was hung on every occasion it was supposed to be, and was taken down exactly at sundown as custom requires. Mr. Eastman was 100% American, and he wanted to be 100% correct in his usage of the American flag.

Mr. Eastman loved his city as well as his country and he was proud of Rochester's parks and its university. Harvey once drove Mr. Eastman and a representative of the United States National Park Service to Durand-Eastman Park. When this man said the people of Rochester must be rich to afford facilities of such a park Mr. Eastman replied the only fee was one made for locker if people wanted to go in swimming. This beautiful park was freely available to the people of Rochester for golfing, picnicking and other outdoor summer enjoyment.
When the University of Rochester and the Strong Memorial Hospital were being built, in 1927, Harvey drove Mr. Eastman there every Sunday and he got out and looked around. He watched the progress of construction and mentally compared it with the schedule. One day they drove up Mt. Hope Avenue to the River path, which was then just a lane. Mr. Eastman had Harvey check the time for making a trip from the University to St. Paul and Main Street, in the heart of the city. It took a little more than four minutes. Harvey believes he was thinking at that time about the Boulevard which he wanted the city to build along the Genesee River.

At the University, they were moving a large elm tree which stood in the way after a house on the Quadrangle had been moved. Mr. Eastman knew the tree was to be moved so he had Harvey take him out there. The tree fell before he got there, so it had to be sawed up. Mr. Eastman was curious to see how a tree could be moved and he also was interested in anything that improved the University of Rochester.

Practically every Sunday afternoon when Eastman Theater was in operation Mr. Eastman went there just to "keep tabs on" the programs. Sometimes he stayed only a few minutes; other times he remained for an entire performance. He liked the idea of the rising platform upon which the orchestra rose from the pit. The idea probably was obtained from the old New York Hippodrome. Mr. Eastman undoubtedly liked the rising platform because it avoided the confusion of players filing in one at a time and seating themselves. They all were seated ready to perform when the platform rose. Mr. Eastman liked the best in films and he tried to see
personally that the people of Rochester were given the best films when they attended his theater. Mr. Eastman spent many hours in the screening room picking out the best pictures from the many which were offered to him for selection by the distributors. Owing to Mr. Eastman, the people of Rochester can hear the Metropolitan and other operatic companies. Before the Eastman Theater was built, there was no theater in the city having a stage large enough to accommodate an opera cast.

With his keen ear for music, Mr. Eastman was critical of acoustics, and it is notable there are no "dead spots" in the Eastman theater. He wanted equal enjoyment available to rich and poor who attended musical events in his theater. He wanted the person in the gallery to hear the music as well, and enjoy it as greatly, as the person who held a season ticket in the mezzanine. Just after sound pictures came out, Mr. Eastman and Arthur J. Kelly, then publicity director for the Eastman Theater were driven by Harvey to all the motion picture theaters in Rochester in succession to spend a few minutes in each to listen to the sound effects. Mr. Eastman was well satisfied when he mentally compared the acoustics with those of his own theater.

Mr. Eastman, when not engaged in business, cultural or other outside activities, enjoyed the quiet association of good friends and among these was George Todd, late president of Todd Company (check-protection systems.) Harvey often drove to Mr. Todd’s home at 1475 East Avenue and brought him back to the house, then Mr. Eastman got in and the two men talked and enjoyed each other’s company as they were driven about. Mr. Todd was virtually a "twin" of Mr. Eastman, Harvey says, for they looked alike and
had mutual interests in music, business, flowers, and hunting—among other subjects.

Coming events cast their shadows before and a few months before the end Mr. Eastman had a cold and did not take his usual drive on Sunday afternoon, as it was a stormy day. He had not been out for a few days and, apparently, some friends thought he had passed away. This amused Mr. Eastman, and annoyed him too, and he said "Harvey, get the car and we'll go out and show them I'm not dead." Evidently heard this, Mr. Eastman, but as it might seem

Mr. Eastman's last drive was taken on the Saturday afternoon before his death. Mr. Dryden, husband of Mr. Eastman's niece, was with him. They started at 2 o'clock and got back at 4:30. They went up Goodman Street, around the University of Rochester and the Strong Memorial Hospital. Then they drove out West Henrietta Road, perhaps to get a good view of the Hospital. They came back Mt. Hope Avenue and as they passed the cemetery there Mr. Eastman asked Harvey "Why are you driving me by the cemetery?" Harvey thought he was joking, but apparently he was depressed for the cemetery made him more gloomy. They drove to St. Paul St. as Mr. Eastman said he wanted to go over the then new Veterans' Memorial Bridge. They went over to Lake Avenue and drove around Kodak Park, then by Dewey Avenue, Ridge Road, and across the Veterans' Memorial Bridge again, and back home by St. Paul Street and East Avenue.
Interview with Harvey Padelford, C.E. chauffeur, 2/1/40
52 Russell Street

Harvey Padelford, who was Mr. Eastman's chauffeur from 1921 until Mr. Eastman's death, told of his routine on the way to work in the morning. Mr. Eastman pulled out a Lucky Strike from his pack of cigarettes and Harvey stopped at the end of the driveway while he lighted up.
